EDUCATION

Institute of Engineering and Rural Technology (IERT), Prayagraj **2025–2029**
B.Tech in Computer Science and Engineering **CGPA: 8.32/10**

TECHNICAL SKILLS

Programming: Python, Java, C, SQL
Machine Learning: Scikit-learn, TensorFlow, PyTorch, XGBoost, Regression, Classification, Clustering, Feature Engineering, Hyperparameter Tuning
AI: LLMs, RAG, Prompt Engineering, LangChain, NLP, Vector Databases
Data Science: Pandas, NumPy, Matplotlib, Seaborn, EDA, Data Cleaning
Backend: FastAPI, Flask, REST APIs
Developer Tools: Git, GitHub, Docker, Linux, VS Code, Jupyter Notebook, Google Colab
Cloud: IBM Cloud, Google Cloud, AWS Fundamentals
Core CS: DSA, DBMS, Operating Systems, Computer Networks, OOP

EXPERIENCE

AI/ML Intern — CodeMore **Jul 2026–Aug 2026**

Remote

- Developed end-to-end ML workflows using Python, Pandas, NumPy and Scikit-learn, including preprocessing, feature engineering and model training.
- Built and evaluated classification and regression models using cross-validation and hyperparameter tuning, achieving accuracy up to 94% on assigned datasets.
- Automated EDA and preprocessing workflows using reusable Python scripts; collaborated through Git/GitHub and documented experiments in Jupyter Notebook.

AI & IBM Cloud Intern — IBM SkillsBuild – Edunet Foundation **Aug 2026–Sep 2026**

- Completed project-based AI and IBM Cloud training covering supervised and unsupervised machine learning.
- Applied cloud concepts to AI projects and built an end-to-end ML solution covering preprocessing, training, evaluation and model interpretation.

PROJECTS

UPI Fraud Detection System — Live Link *Python, Machine Learning, Streamlit*

- Built and deployed a live UPI fraud detection app that flags risky transactions in real time, as measured by instant fraud/legitimate predictions on user-entered transactions, by training an ML classification model and serving it through an interactive Streamlit interface.
- Made the model usable by non-technical users, as measured by a publicly accessible Streamlit Cloud deployment, by packaging preprocessing and prediction into one end-to-end scoring pipeline.

AI Job Recommendation System (CareerMatch AI) — Live Link *Python, Streamlit, NLP, TF-IDF*

- Delivered ranked job recommendations from PDF/Word resumes, as measured by a per-job match score for every opening, by extracting skills with NLP and combining TF-IDF cosine similarity (30%) with required-skill coverage (70%).
- Gave candidates actionable feedback, as measured by detected skills, matched skills and skill gaps shown for each job, by structuring the app into resume-parser, skill-extractor and recommender modules deployed on Streamlit Cloud.

Dynamic Portfolio & Resume Generator — Live Link *Python, Streamlit, SQLite*

- Automated ATS-friendly PDF resume and HTML portfolio creation from a single profile form, as measured by both outputs generated in one workflow, by building a modular Streamlit + SQLite app with input validation and privacy settings.
- Extended the app into a job-search workspace, as measured by an integrated job matcher, application tracker and dashboard, by adding admin authorization and automated generator tests, then deploying on Streamlit Cloud.
